Compact Mobile Storage
and Filing Systems
Products summary

bertello

Euromobil

Euromobil is a filing system consisting of mobile trolleys that can be electrically or mechanically driven.

The solution with compact mobile modules enables to double the number of documents stored compared to traditional shelving system still occupying the same area. Thanks to the movement of the trolleys, it is possible to access the required corridor.

The handling system without the use of rails, differences of levels or platforms is patented and does not require making holes or damaging the existing floor on which the system is only placed.

This allows a proper and completely safe access even to disabled operators.

The traction is carried out by a "four driving wheels" system that guarantees a correct displacement by means of one single slide guide placed at the back of the installation (usually leaned against a wall) thus eliminating any floor obstacle.

The solution also permits self-recovery of slight differences in level of the existing flooring.

EUROMOBIL

Euromag

Euromag is a storage system designed to exploit the space at its best.

Simplicity, affordability and expandability are the features that distinguish it.

Euromag is undoubtedly the best solution to achieve very high density storage of materials with medium-low speed of rotation.

The system consists of compact mobile trolleys, electrically driven, supporting traditional or cantilever shelving systems, with defined shape and size according to the material to be stored and to the maximum use of available space.

Euromag is suitable for any environment and can be reconfigured; if necessary, it can be relocated with extreme simplicity and at low costs.

Space optimization
Economic
Modular

Modularity enables to meet every need of storage.
